Good morning Kyrick,

It was nice to talking with you the other day. Per our conversation, I wanted to confirm with you that due to the distance of the facility to any NPS class I areas, we will not be requesting a class I analysis for this project. However, we maintain an interest in reviewing the effects on several Class II park units, which are much closer to the proposed project; Missouri National Recreational River, and Homestead National Monument. I understand some visibility modeling has been completed for these sensitive Class II areas, which I can download from your website. Please advise me of any other information I should be looking at, and I appreciate you continuing to keep me informed regarding the schedule of this project.

Finally, while we have screened this permit from further class I evaluation, please keep us informed should the proposed emissions from this facility change during the permitting phase, as this may affect our decision. Additionally, this determination was made prior to receiving or reviewing any applicable Class I modeling information or files. Our screening of this permit does not imply our consent, or our objection to any Class I air quality modeling that may have been completed for this project. Thank you for the opportunity to review this information and please feel free to contact me if you have any questions.
